LED LilyPad Frame

Written By: Mmc

TOOLS:
- Double-sided tape (1)
- Hot glue gun (1)
- Soldering iron (1)

PARTS:
- LilyPad LED lights (4)
- 2N2222 NPN transistor (1)
- 1/4W 5% 100K resistor (1)
- Resistors, 1kΩ (1)
- PIR proximity sensor (1)
- small pc board (1)
- Cardboard (1)
- black and white wire (1)
- Photocell (1)
- 9V charger (1)
- Picture frame (1)

SUMMARY

You may have the most beautiful picture, diploma, or award that's hiding in the dark. Now you can illuminate it with the LED LilyPad Frame, and bring it to life.

Here are the materials you will need to build this beautiful project:
**Step 1 — Cutting time!**

- Take the padded cardboard and cut out two squares .75 inches by .75 inches. (It has to be .30 inch thick.) Then cut each of the squares across the diagonal to make triangles.
- You will need four of these triangles.

**Step 2 — Next :)**

- Solder a white or red wire to the positive side of a LilyPad and the black wire to the negative side.
- Do this for all four of the LilyPads.
Step 3 — Gluing

- Glue the LilyPad to the hypotenuse of one of the triangles.
- Then take a piece of the double-sided tape and apply it to one side,
- Repeat for all four corners.

Step 4 — Circuit

- This is the circuit that makes everything work.
- Make sure you have a breadboard to test out everything before you solder it together.
Step 5 — Final assembly

- After you are done with all the connections, then glue a triangle into each corner of the frame.
- Enjoyyyyyyyyyyyyyyyy :)
